

F-LON® 6040- Case study

Product

Winding Cone

Industry

Industrial - Packaging Industry

Challenge

Our client requested the prevention of adhesive build-up on winding cones used in the process of winding pre-printed packaging tape onto the cardboard carrier in preparation for distribution.

Solution

We coated the winding cones in a 3 coat hard wearing, non-stick coating system F-LON® 6040 which arrests excessive build-up of adhesive on the cones surface, preventing the breaking of tape during winding process therefore increasing run times and decreasing operational down time.
