

F-LON® 7120 - Case study

Product

Liquid gas pipeline delivery system

Industry

Chemical- Pharmaceutical

Challenge

Our client wanted a chemically resistant coating with cryogenic stability for use on tanker delivery pipe clamps.

Solution

We applied F-LON® 7120 to the inner surfaces of triclover clamps used to secure tanker delivery systems when decanting liquid gases, the application of this superior coating prevented unnecessary down time due to the clamping system freezing to pipes, allowing easy removal of delivery system despite being frozen with the added benefit of chemical resistance.
