

F-LON® 9000- Case study

Product

Heater Element for white goods

Industry

Whitegoods

Challenge

The client wanted a solution to prevent lime scale build up on the heater element. The desired outcome was to prevent premature failure of the element and therefore extending the life of the product for their end customer.

Solution

We applied High Temperature resistance F-LON® 9000 coating to parts of the heater element in contact with water.

Our clients are currently life testing their equipment in the field with good results.

This solution will allow our client to offer an extended life guarantee and provide added value, putting their product into the high end category.
